Brief

Using JavaScript and Svelte, your challenge is to build a Two Factor Authentication component following this [Link](https://dribbble.com/shots/10960055-Two-factor-authentication-2FA) (https://dribbble.com/shots/10960055-Two-factor-authentication-2FA) using Tailwind for CSS.

Evaluation Criteria

- JavaScript and Svelte best practices.
- We're looking for you to produce working code, with enough room to demonstrate how to structure components in a small program or component.
- Completeness: did you complete the features?
- Correctness: does the functionality act in sensible, thought-out ways?
- Maintainability: is it written in a clean, maintainable way?

Most importantly; you will be assessed on how accurately you made the design; support for keyboard events, such as copy, paste, select (shift+left/right) and cut; input validation and general user experience.

Deliverables

Please organize, design, test, and document your code as if it were going into production. Submit your solution as a GitHub repository or a ZIP file containing the code and any necessary configuration files.

Deadline - 2 days

Have fun building!
